Spam & Virus Protection

Protection made simple.

Keep your inbox and your servers free of spam and viruses with the award-winning SecureTide™ service. There's no contract required, no expensive equipment to install, and, best of all, no more junk mail or malicious messages in your inbox.

Inbound and outbound email protection.

The SecureTide filtering system is continually updated thousands of times per day to ensure protection from even the newest Spammer tricks and tactics. It works on multiple platforms and utilizes proprietary detection systems, four virus-scanning engines, more than 60 filtering techniques, and wave-front detection to rid inbound and outbound email from spam, worms and viruses as well as protocol-based vulnerabilities.

| Perimeter Protection | Virus Scanning | Quarantine | **Delivery to Network** |

Daily held spam reports.

Perhaps one of our most popular features is our Held Spam Reports. Even the most effective solutions will occasionally stop a valid message. When this happens, SecureTide users can instantly release the message by using their daily Held Spam Report. This detailed report can be enabled per end user and provides 100% visibility of all mail that has been held as spam or "junk."
